

AMENDMENTS TO THE CLAIMS

1-6. (Cancelled)

7. (Currently amended) A method for selecting single-walled carbon nanotubes of 1.2 nm diameter from a mixture of single-walled carbon nanotubes of various diameters, comprising irradiating the mixture of single-walled carbon nanotubes of various diameters with a light beam of a single wavelength of 620 nm under an oxidative environment to obtain single-walled carbon nanotubes of 1.2 nm diameter.

8. (Currently amended) The method according to claim 7, wherein the oxidative environment comprises an oxidizing agent selected from the group consisting of hydrogen peroxide in water, nitric acid and potassium permanganate ~~is used for oxidization of the single-walled carbon nanotubes to provide the oxidative environment.~~

9. (Currently amended) The method according to claim 8, wherein the oxidization is carried out at a temperature range of 0°C to 500°C of 0°C or more and 500°C or less.

10. (Currently amended) A method for removing single-walled carbon nanotubes of 0.96 nm and 1.0 nm diameters from a mixture of single-walled carbon nanotubes of various diameters, comprising irradiating the mixture of single-walled carbon nanotubes of various diameters with a light beam of a single wavelength of 420 nm under an oxidative environment to remove single-walled carbon nanotubes of 0.96 nm and 1.0 nm diameters.

11. (Currently amended) The method according to claim 10, wherein the oxidative environment comprises an oxidizing agent selected from the group consisting of hydrogen peroxide in water, nitric acid and potassium permanganate ~~is used for oxidization of the single-walled carbon nanotubes to provide the oxidative environment.~~

12. (Currently amended) The method according to claim 11, wherein the oxidization is carried out at a temperature range of 0°C to 500°C of 0°C or more and 500°C or less.

13. (Currently amended) A method for removing single-walled carbon nanotubes of 1.0 nm and 1.1 nm diameters from a mixture of single-walled carbon nanotubes of various diameters, comprising irradiating the mixture of single-walled carbon nanotubes of various diameters with a light beam of a single wavelength of 500 nm under an oxidative environment to remove single-walled carbon nanotubes of 1.0 nm and 1.1 nm diameters.

14. (Currently amended) The method according to claim 13, wherein the oxidative environment comprises an oxidizing agent selected from the group consisting of hydrogen peroxide in water, nitric acid and potassium permanganate ~~is used for oxidization of the single-walled carbon nanotubes to provide the oxidative environment.~~

15. (Currently amended) The method according to claim 14, wherein the oxidization is carried out at a temperature range of 0°C to 500°C of 0°C or more and 500°C or less.

16. (Currently amended) A method for removing single-walled carbon nanotubes of 0.96 nm, 1.0 nm and 1.1 nm diameters from a mixture of single-walled carbon nanotubes of various diameters, comprising irradiating the mixture of single-walled carbon nanotubes of various diameters with a light beam of a single wavelength of 620 nm under an oxidative environment to remove single-walled carbon nanotubes of 0.96 nm, 1.0 nm and 1.1 nm diameters.

17. (Currently amended) The method according to claim 16, wherein the oxidative environment comprises an oxidizing agent selected from the group consisting of hydrogen peroxide in water, nitric acid and potassium permanganate ~~is used for oxidization of the single-walled carbon nanotubes to provide the oxidative environment.~~

18. (Currently amended) The method according to claim 17, wherein the oxidization is carried out at a temperature range of 0°C to 500°C of 0°C or more and 500°C or less.
